ThinkMate

You said the bridge failed due to material fatigue — a good start. But what assumptions are you making about the load conditions?

You

I assumed constant static load, but maybe cyclic loading played a bigger role.

ThinkMate

Excellent. Can you evaluate what evidence would help you decide between these two hypotheses? Think about Bloom's 'Evaluate' level.

Reflection Prompt

What intellectual standard (clarity, accuracy, depth) would strengthen your reasoning here?

Type your response...
